

Get More Projects, Productivity & Profit with Genuine - NO SMELL - Asphalt

Get More Jobs

The majority of complaints surrounding BUR (Built Up Roofing) are related to fumes & odor. This has resulted in Roofing Contractors having to schedule work during expensive & inconvenient times in order to reduce complaints. With Genuine - NO SMELL - asphalt you can bid sensitive jobs with confidence. Schools, Hospitals, Apartments, Office buildings and more have all been successfully roofed while occupied due to the proven effectiveness of Genuine - NO SMELL - asphalt.

Get More Productivity

Comfortable employees are productive employees. You can dramatically reduce your employees exposure to asphalt fumes & odors both at the kettle and on the roof by using only Genuine - NO SMELL - asphalt.

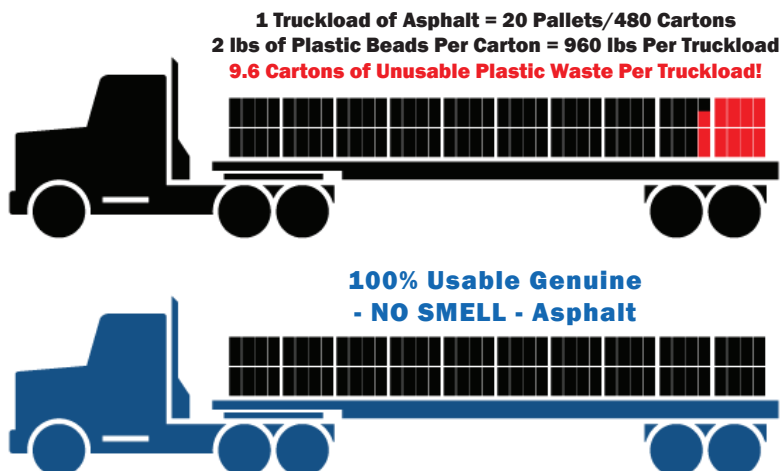

Get More Profit

By being able to bid more jobs, perform those jobs during normal business hours and benefit from increased worker satisfaction and productivity you can maximize your precious profits. Make more and reduce time on the job by bidding every job with Genuine - NO SMELL - asphalt.

Are all Low Odor / Low Fume Asphalts Created Equal?

No. There have been a number of different methods used to control odors and fumes by various asphalt manufacturers. One method is to use fragrances to try and mask the odor. However, this does not eliminate odors nor does it help with fumes. Another popular method is to use polymer (usually plastic) beads in the asphalt that melt and form a skin on the top of the asphalt to block the fumes in the kettle from escaping. However, this method does not reduce odors or fumes on the roof at the point of application. In addition, there is a lot of waste of material as the plastic must be skimmed off and thrown away. Average amounts of polymer/plastic beads range from 1-2% of the total material by weight. That does not sound like much but it can really add up. See the graphic below to see just how much asphalt you could be losing on your jobs!

The Genuine - NO SMELL - Advantage

United Asphalts is one of the pioneers of true - NO SMELL - technology. We use a specially formulated odor suppressant that virtually eliminates asphalt odors both at the kettle and on the roof. In addition, United Asphalts has some of the highest flash-points in the industry, meeting or exceeding ASTM D312-15 minimum flash-point of 575 [F]. Higher flash-points result in less fuming of the asphalt at the kettle and on the roof. When you combine that with our - NO SMELL - technology you have one of the easiest to use, highest quality asphalts on the market. Get more with United Asphalts!
